

# SENSORY INVESTIGATION FOR PRODUCT INNOVATION

PROJECT NAME: DREAMFLOWER SENSORY  
PROJECT NUMBER: 21-009648-01  
REPORT – VERSION 2

**DIAGEO**

**GAME CHANGERS**

# STUDY BACKGROUND

- Diageo is looking for levers of growth in the whisky category, specially among the affluent young adults. With this objective, it wished to understand 'critical product characteristics' that influence consumer liking and identify consumer segments with respect to their sensory preferences.
- Additionally, a key hypothesis is that Indian Upper-Prestige consumers palate is shifting from whiskeys with traditional Scotch profiles (smokey/peaty/aged wood) to whiskeys with fruitier, more floral sensory profiles. Diageo wishes to examine this hypothesis, hence created few prototypes to identify the winning ones that will drive category growth in near future.
- This document presents the findings based on consumers' evaluation done by IPSOS Research, as well as a Statistical Modelling exercise linking consumers' liking data with sensory data from the client's trained sensory panel.

# CONTENT

## BUSINESS CONTEXT & APPROACH

*Research background and details  
of the research process*

## PRODUCT PERFORMANCE

*Performance of the products at  
Overall on Appearance, Aroma  
and Taste likeability*

## SENSORY SEGMENT RESULTS

*Emerging segments and  
their characteristics*

## BRAND IMPACT

*Assessing Impact of Brand on  
KPIs – Appearance, Aroma  
and Taste likeability*

## SUMMARY AND IMPLICATIONS

# OBJECTIVES

Identify the whiskey blends that will drive the category growth in the near future

1

Measure performance of traditional whiskies versus the modern flavours such as fruity or floral

2

Quantify the critical product characteristics which influence consumer liking in the market

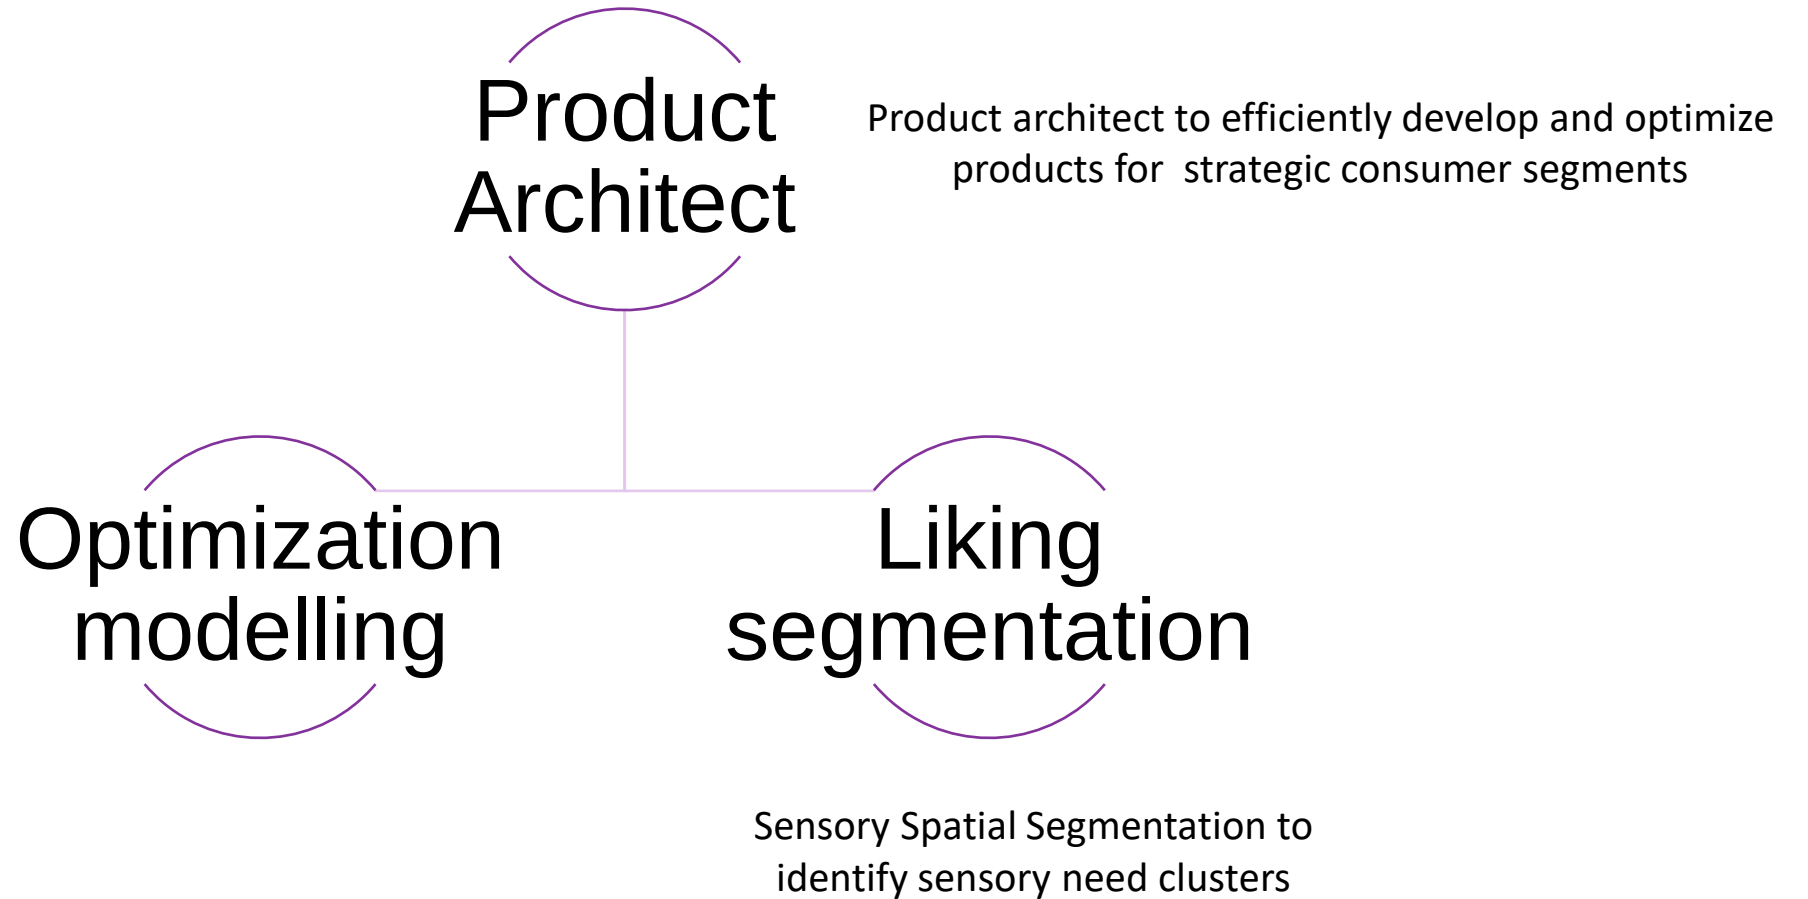

3

Identify and profile consumer segments with particular sensory product preference profiles

4

Understand how Diageo can optimize current product portfolio, to increase overall appeal or differentiate better against a key competitor

# THE FRAMEWORK

# STUDY DESIGN

## 01 Target Group

- Men in the age-group of LDA – 35 years
- From NCCS A households
- Whiskey consumers
- Mix of core as well as evolved consumers
- Markets: South (Bangalore), North (Ludhiana and Delhi)

## 02 Study Specifics

**Methodology** : Sequential monadic evaluation done at CLT

**Products** : 15 products in blind evaluation and 5 in branded. Respondents to evaluate 3 per day

**Design** : Complete design. Each respondent evaluated all the products.

## 03 Coverage & Specifics

**Field location** : Bangalore and Ludhiana / Delhi

**Total sample size** : 514.  
308 for blind evaluation and 206 for branded evaluation across centres

**Length of interview** : 40 mins per day. Each respondent came for 5 days in case of blind evaluation and 2 days in case of branded evaluation

- *Each respondent was served whiskey diluted with water (1:1). The respondent was served 40 ml of each of the diluted liquid (20 ml water mixed with 20 ml whisky at room temperature)*
- *Definition of Evolved Consumers of Whisky*  
*Owns any one of High-end devices like smartphone, Laptop, Tablet Airpods, Smartwatch AND*  
*Taken any OTT subscription or has meal outside home atleast once a week or travelled to international destination for leisure in the past 3 years and*  
*Consumed a Premium / Luxury Whisky brand in the last 1 year*

## CONSUMER FIELDWORK (INDIA)

# INTERVIEW FLOW

The respondents were recruited as per the target profile and invited to a central location test (CLT) for product test

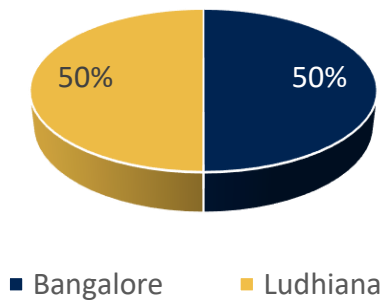

- **Pre-recruitment screener** (10 minutes): category usage and behavioural screening, full consent and legal screening, as well as appointment logistics
- **Product evaluation:**
  - Each respondent evaluated only 3 liquids a day in the CLT.
  - Each liquid was evaluated on appearance, aroma, overall taste liking, flavour perception and emotive pay-offs
  - Each respondent in the blind panel came in to CLT for 5 days. For branded panel, respondent came in for 3 days.
- **Category usage questions:** After all the 15 liquids' evaluation, category usage, occasions, number of occasions, accompaniments etc and basic demographic questions

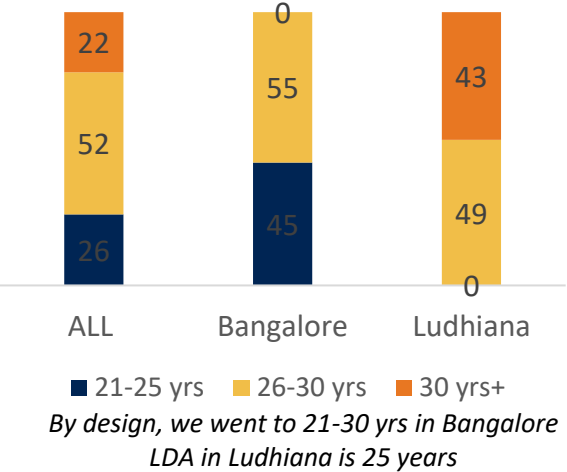

The CLT were done as per the product testing protocols laid down by Diageo India

# WHO DID WE MEET FOR CONSUMER TEST?

\* Confidential \*

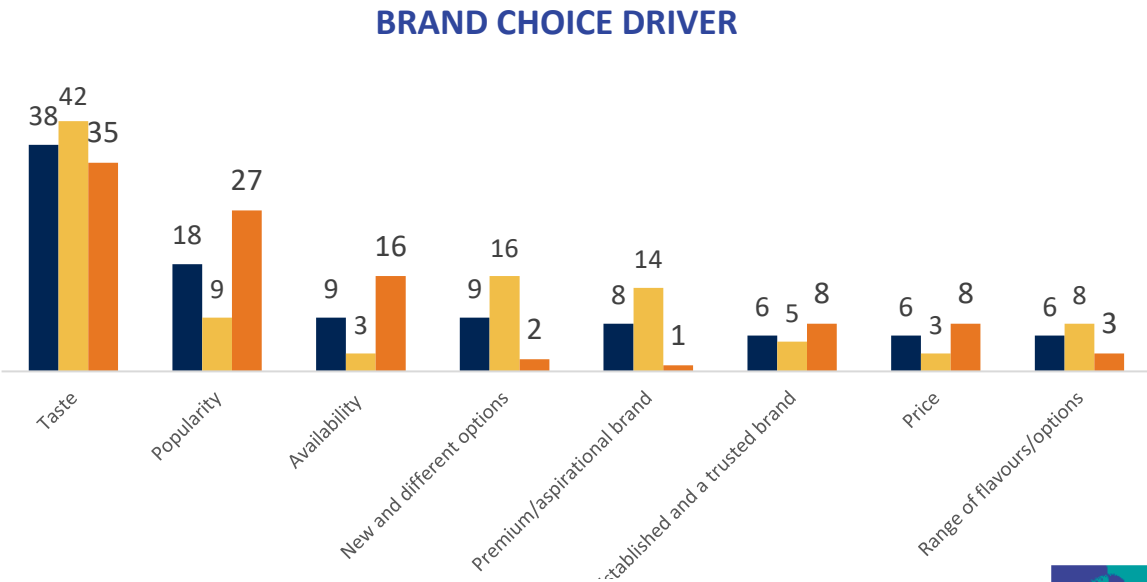

Significant proportion of consumers have been with the category and most consumed brand for a long time, more so in Ludhiana. The category is mostly driven by taste followed by brand popularity- former being more important in Bangalore and latter in Ludhiana. Additionally, availability also plays key role in Ludhiana.

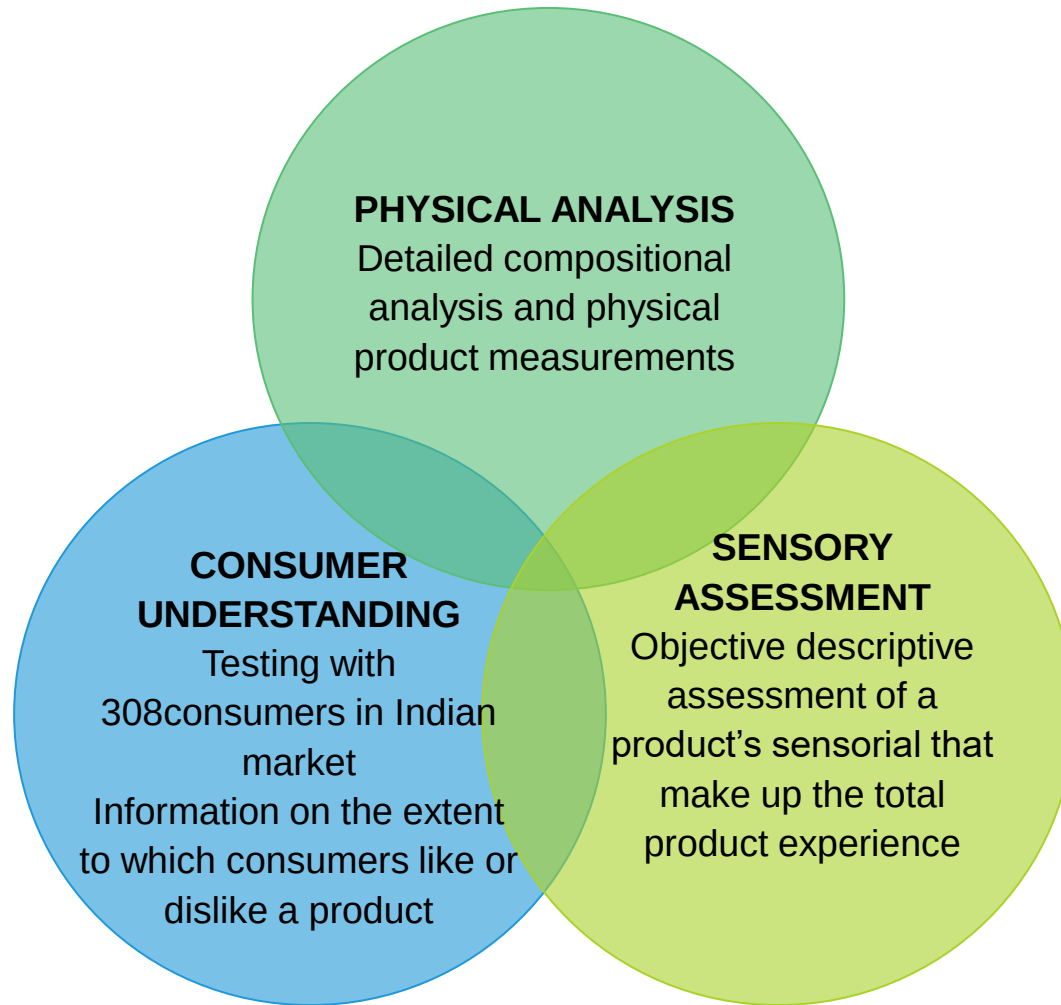

| MOCB CONSUMPTION            | ALL | Bangalore | Ludhiana |
|-----------------------------|-----|-----------|----------|
| Royal Stag                  | 16  | 12        | 19       |
| 100 Pipers                  | 13  | 15        | 10       |
| Black & White               | 11  | 13        | 10       |

| Antiquity                   | 4   | 6         | 1        |

# DATA SOURCES ANALYSED

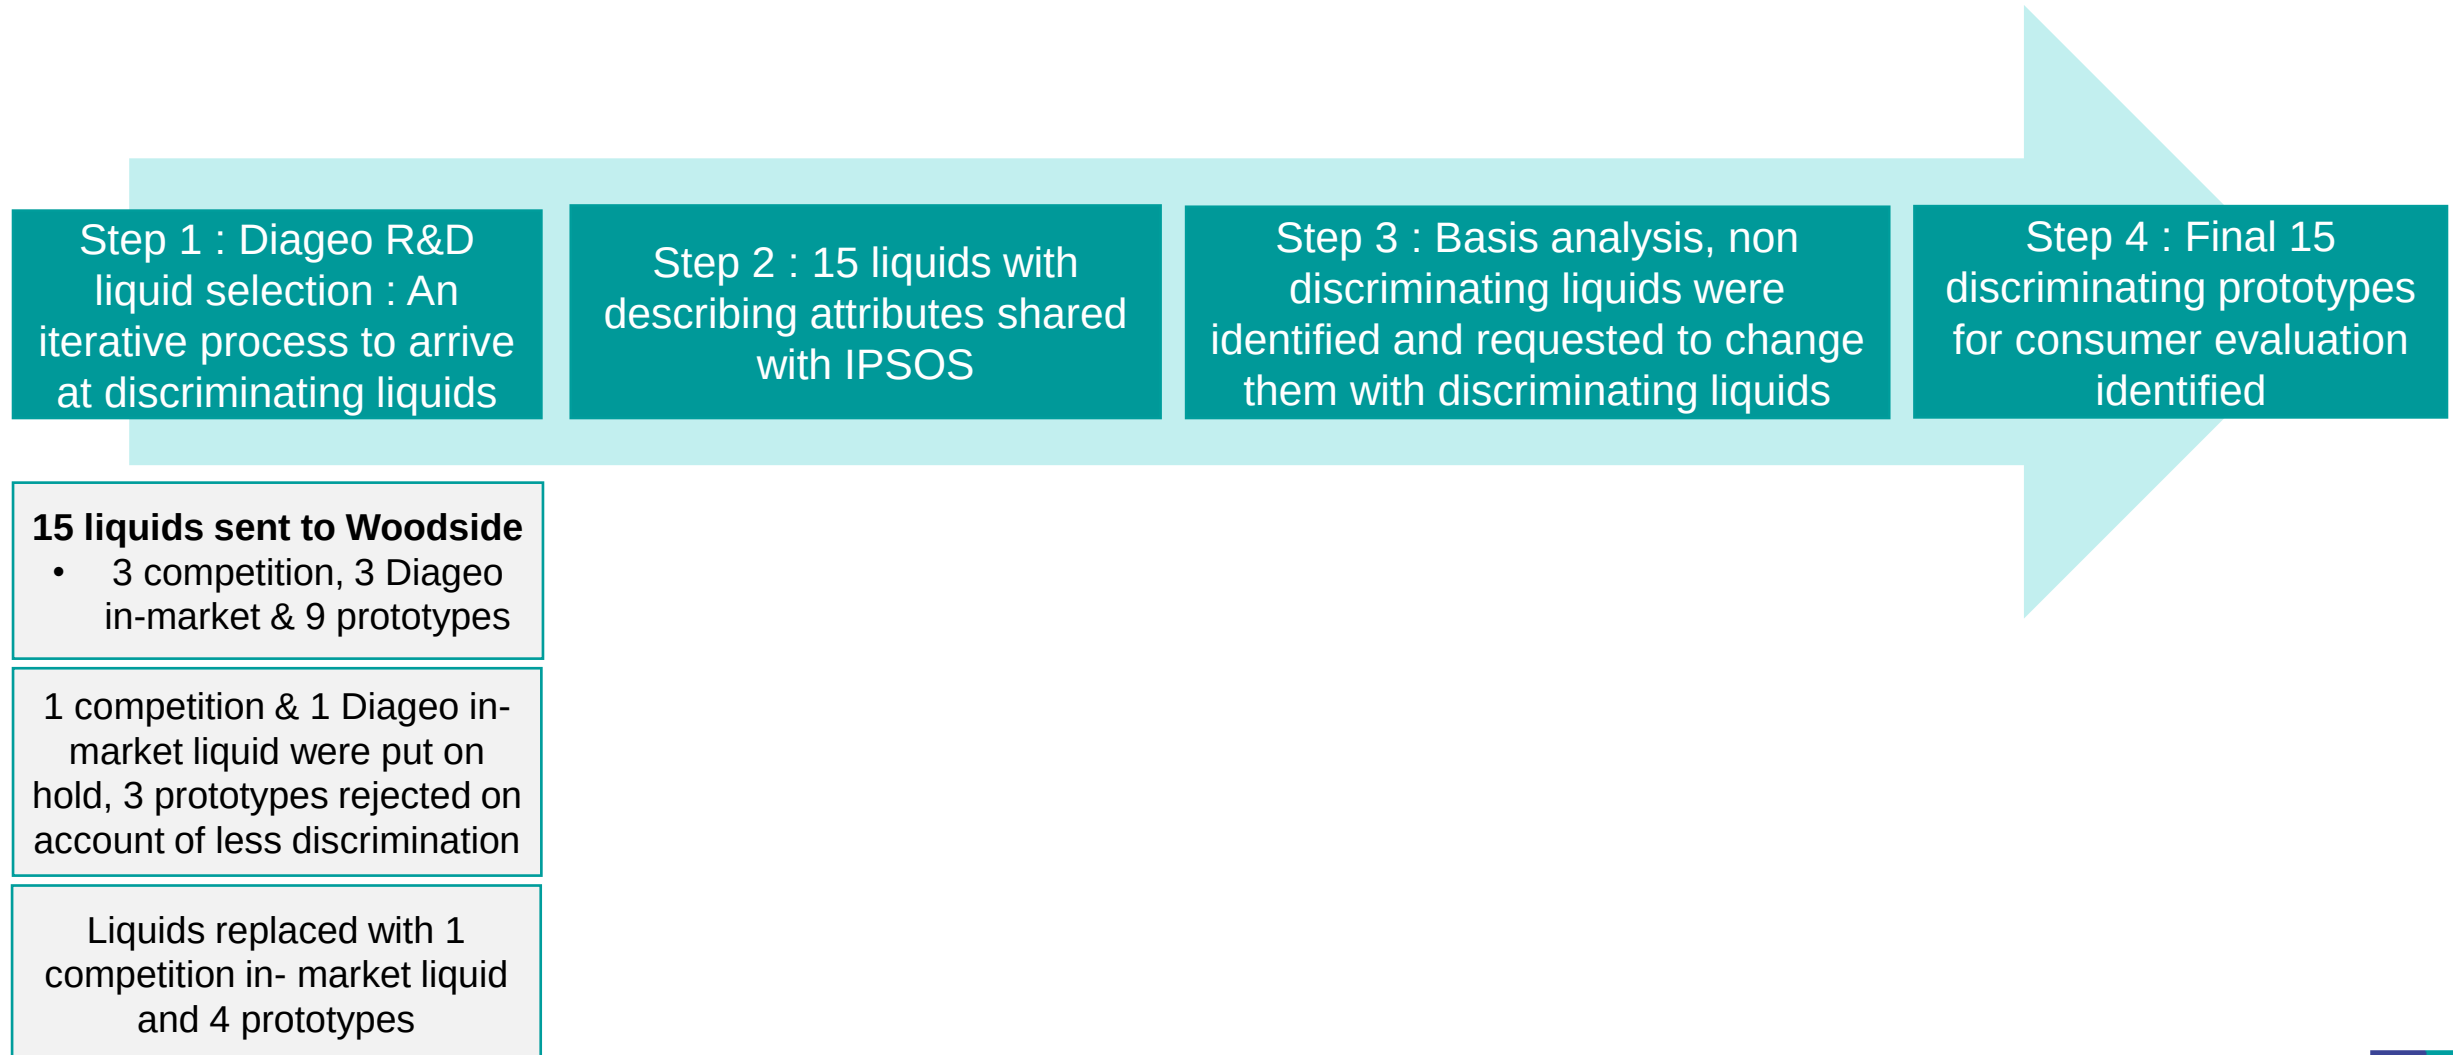

Optimisation modelling and segmentation is based on data from three sources

A combination of three data sources has been used to meet the objectives.

The skilled statistical modelling of these data elements enables us to determine what compositional changes are needed or advised to have a positive effect on consumers, and describe what an ideal product delivery might be.

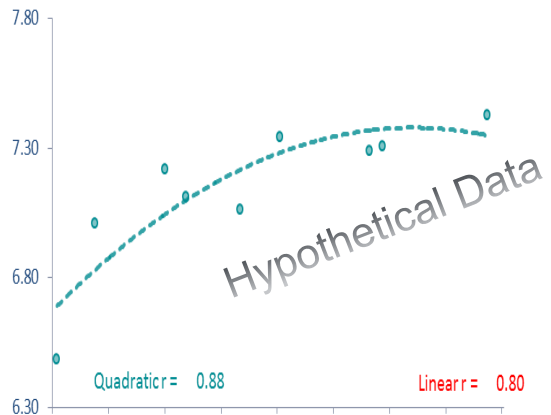

# PROTOTYPE SHORTLISTING FOR THE EVALUATION WAS AN ITERATIVE PROCESS

# ATTRIBUTES WERE GENERATED THROUGH SENSORY AND PHYSICAL MEASUREMENTS

## LINKING SENSORY / PHYSICAL DATA WITH CONSUMER LIKING, TO SCREEN THE ATTRIBUTES

© Ipsos | Dreamflower Sensory\_21-009648-01\_Report\_v3

We started by looking at 1:1 relationships between attributes and overall liking

Narrowing it down from many attributes to less attributes but those that really matter

Keeping attributes that ...

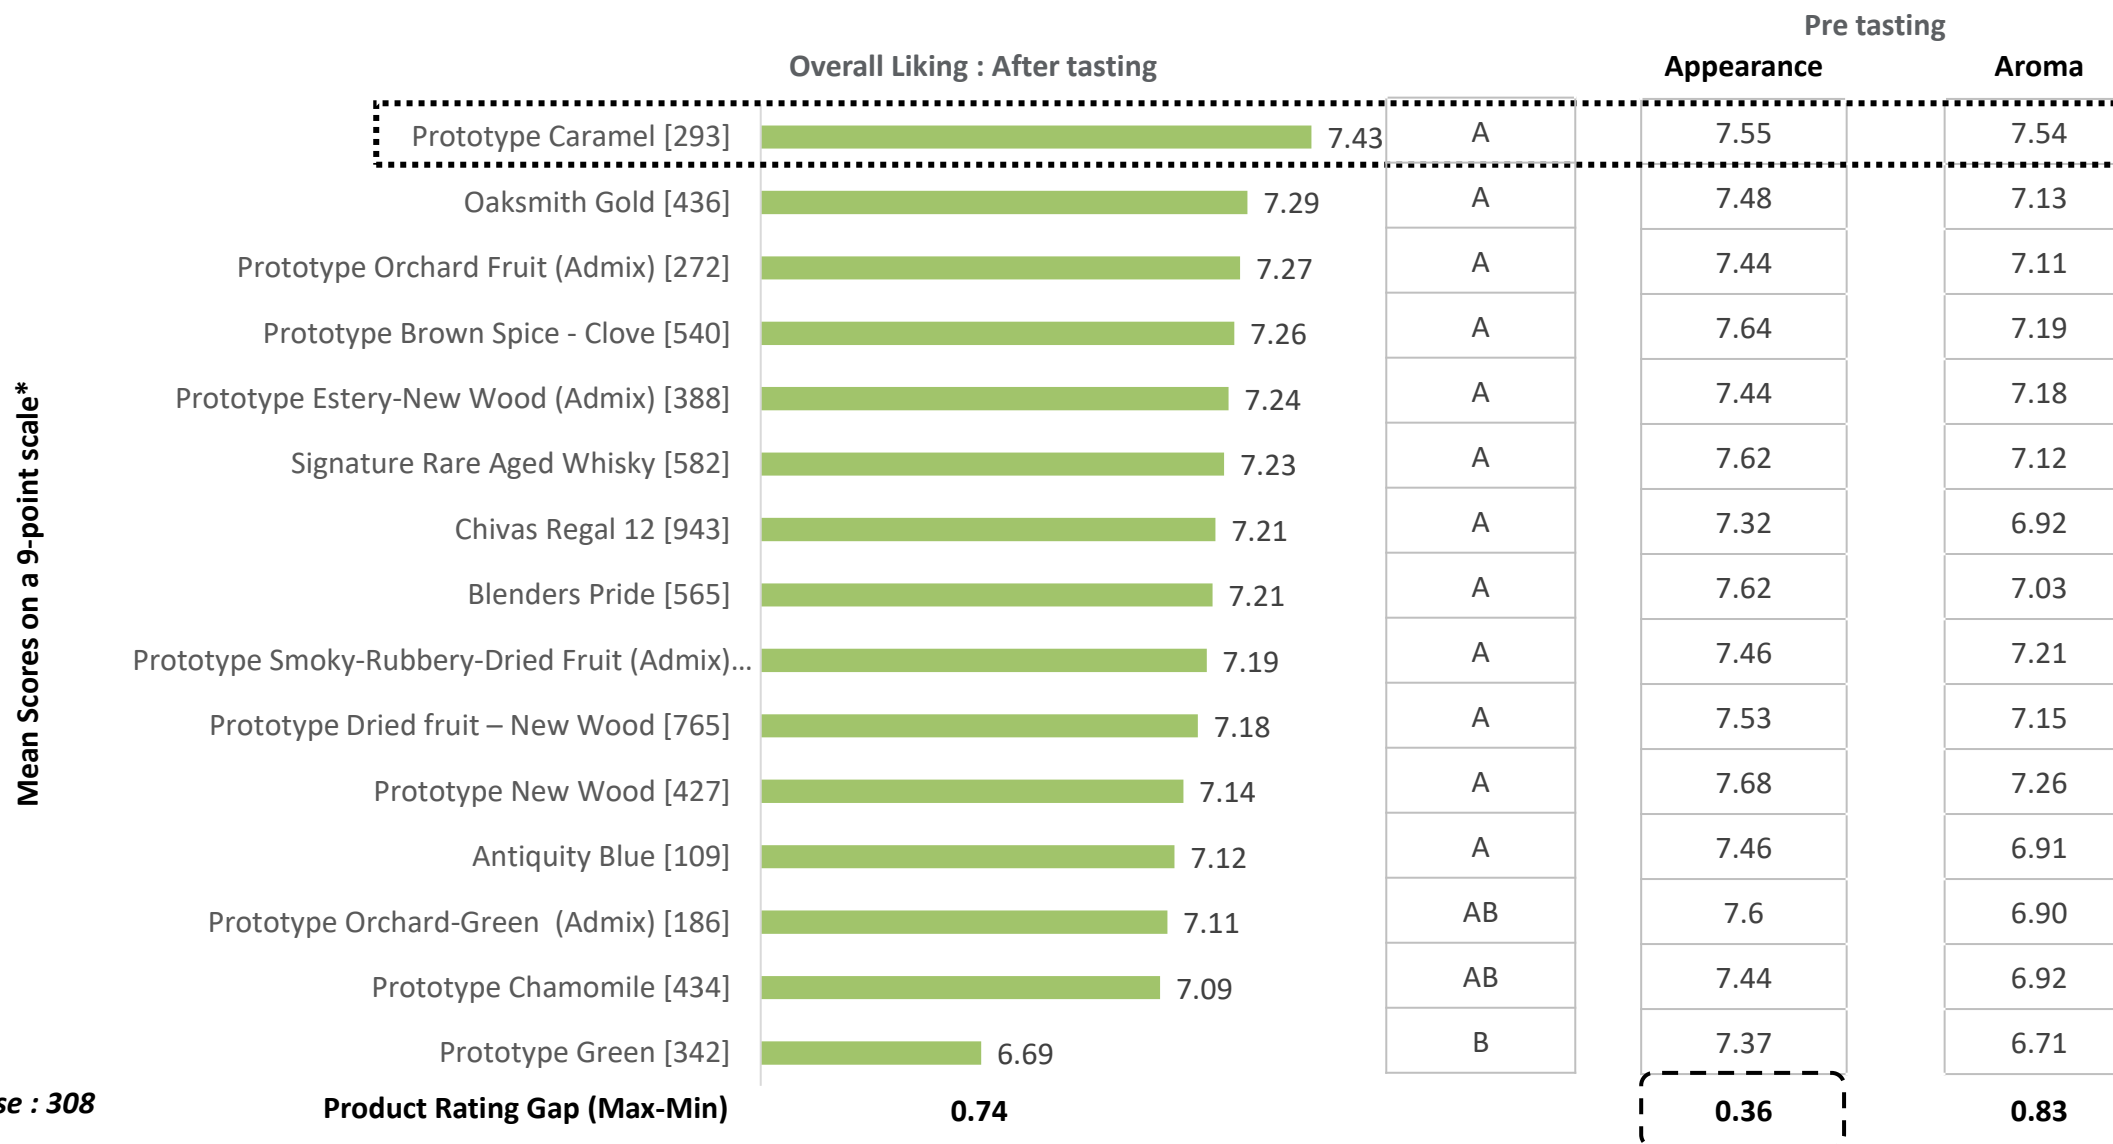

- Show significant differentiation (products that are spreading out well on those attributes)
- Have some relationship to Overall Liking (linear or quadratic [i.e. hill shaped])
- Are well understood by panelists

# PRODUCT PERFORMANCE ASSESSMENT

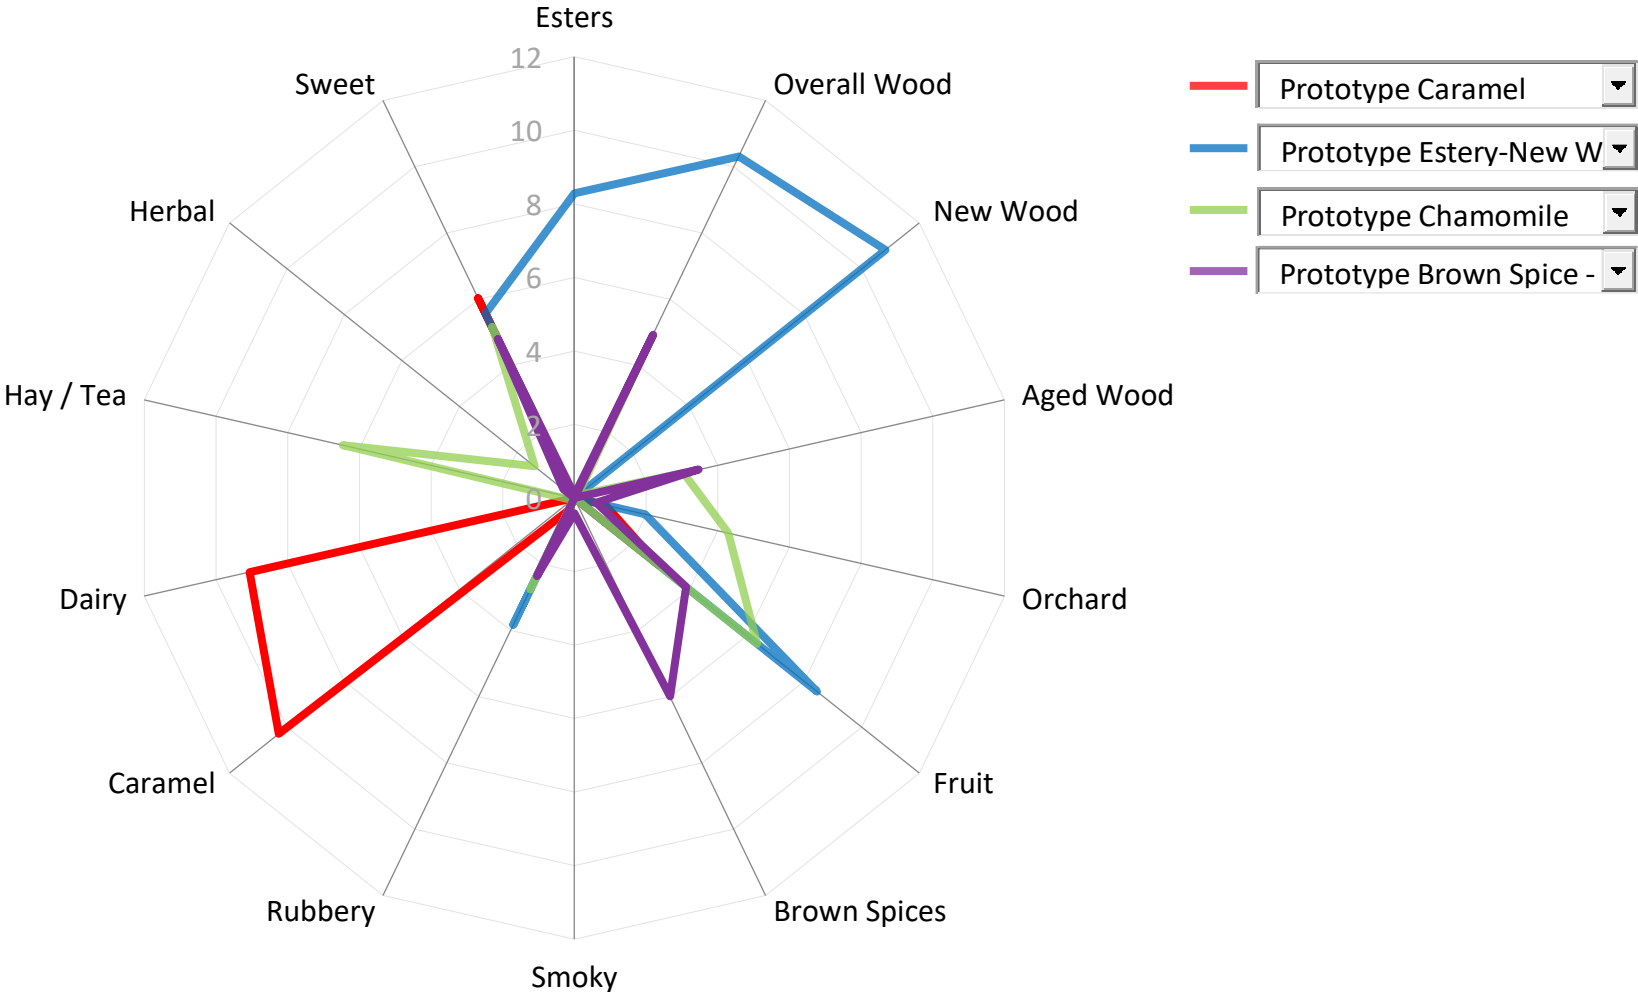

At overall level , little differentiation was found across all tested products, especially true of appearance

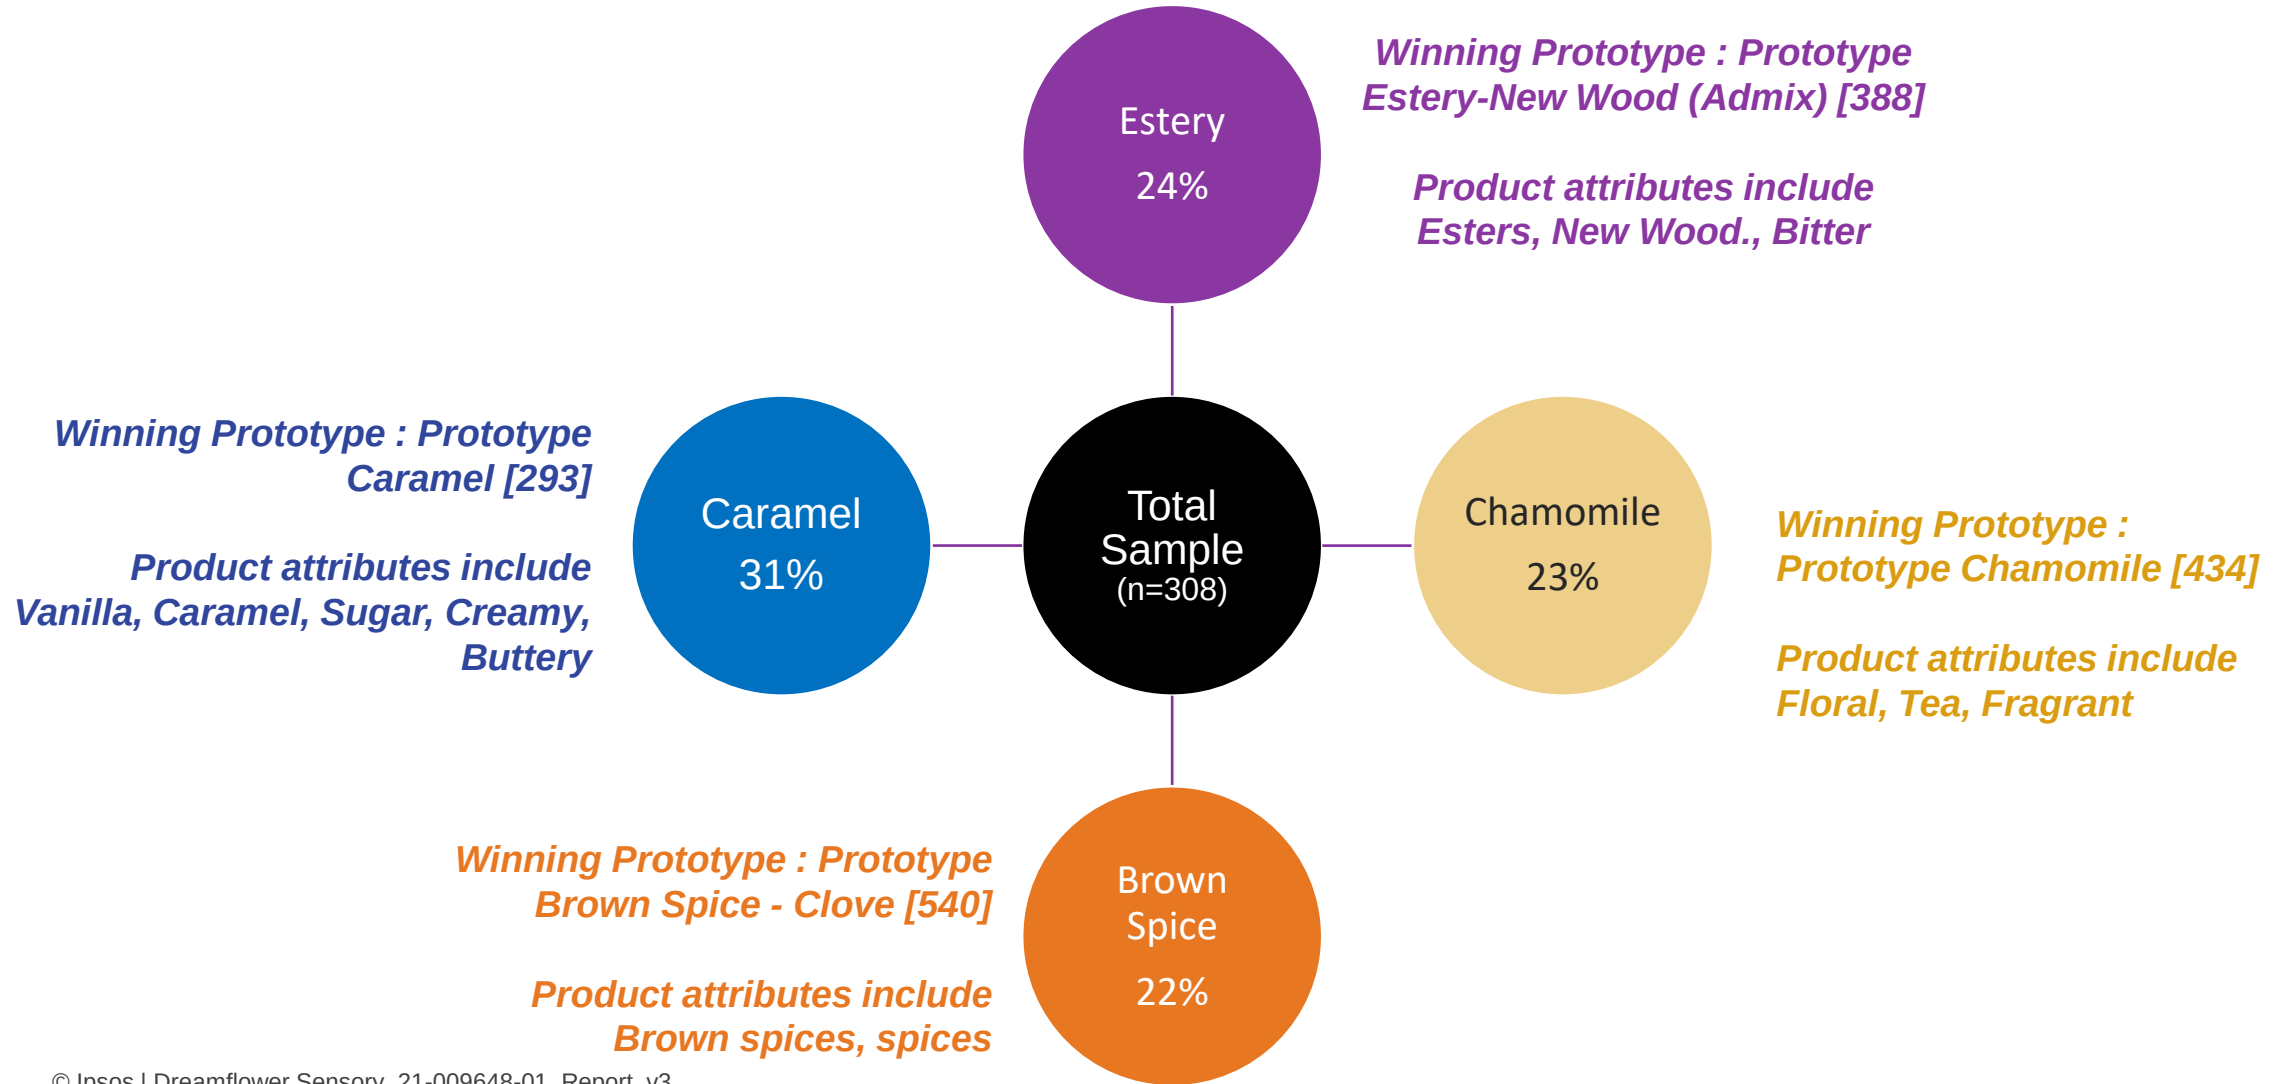

# The Optimal Profile

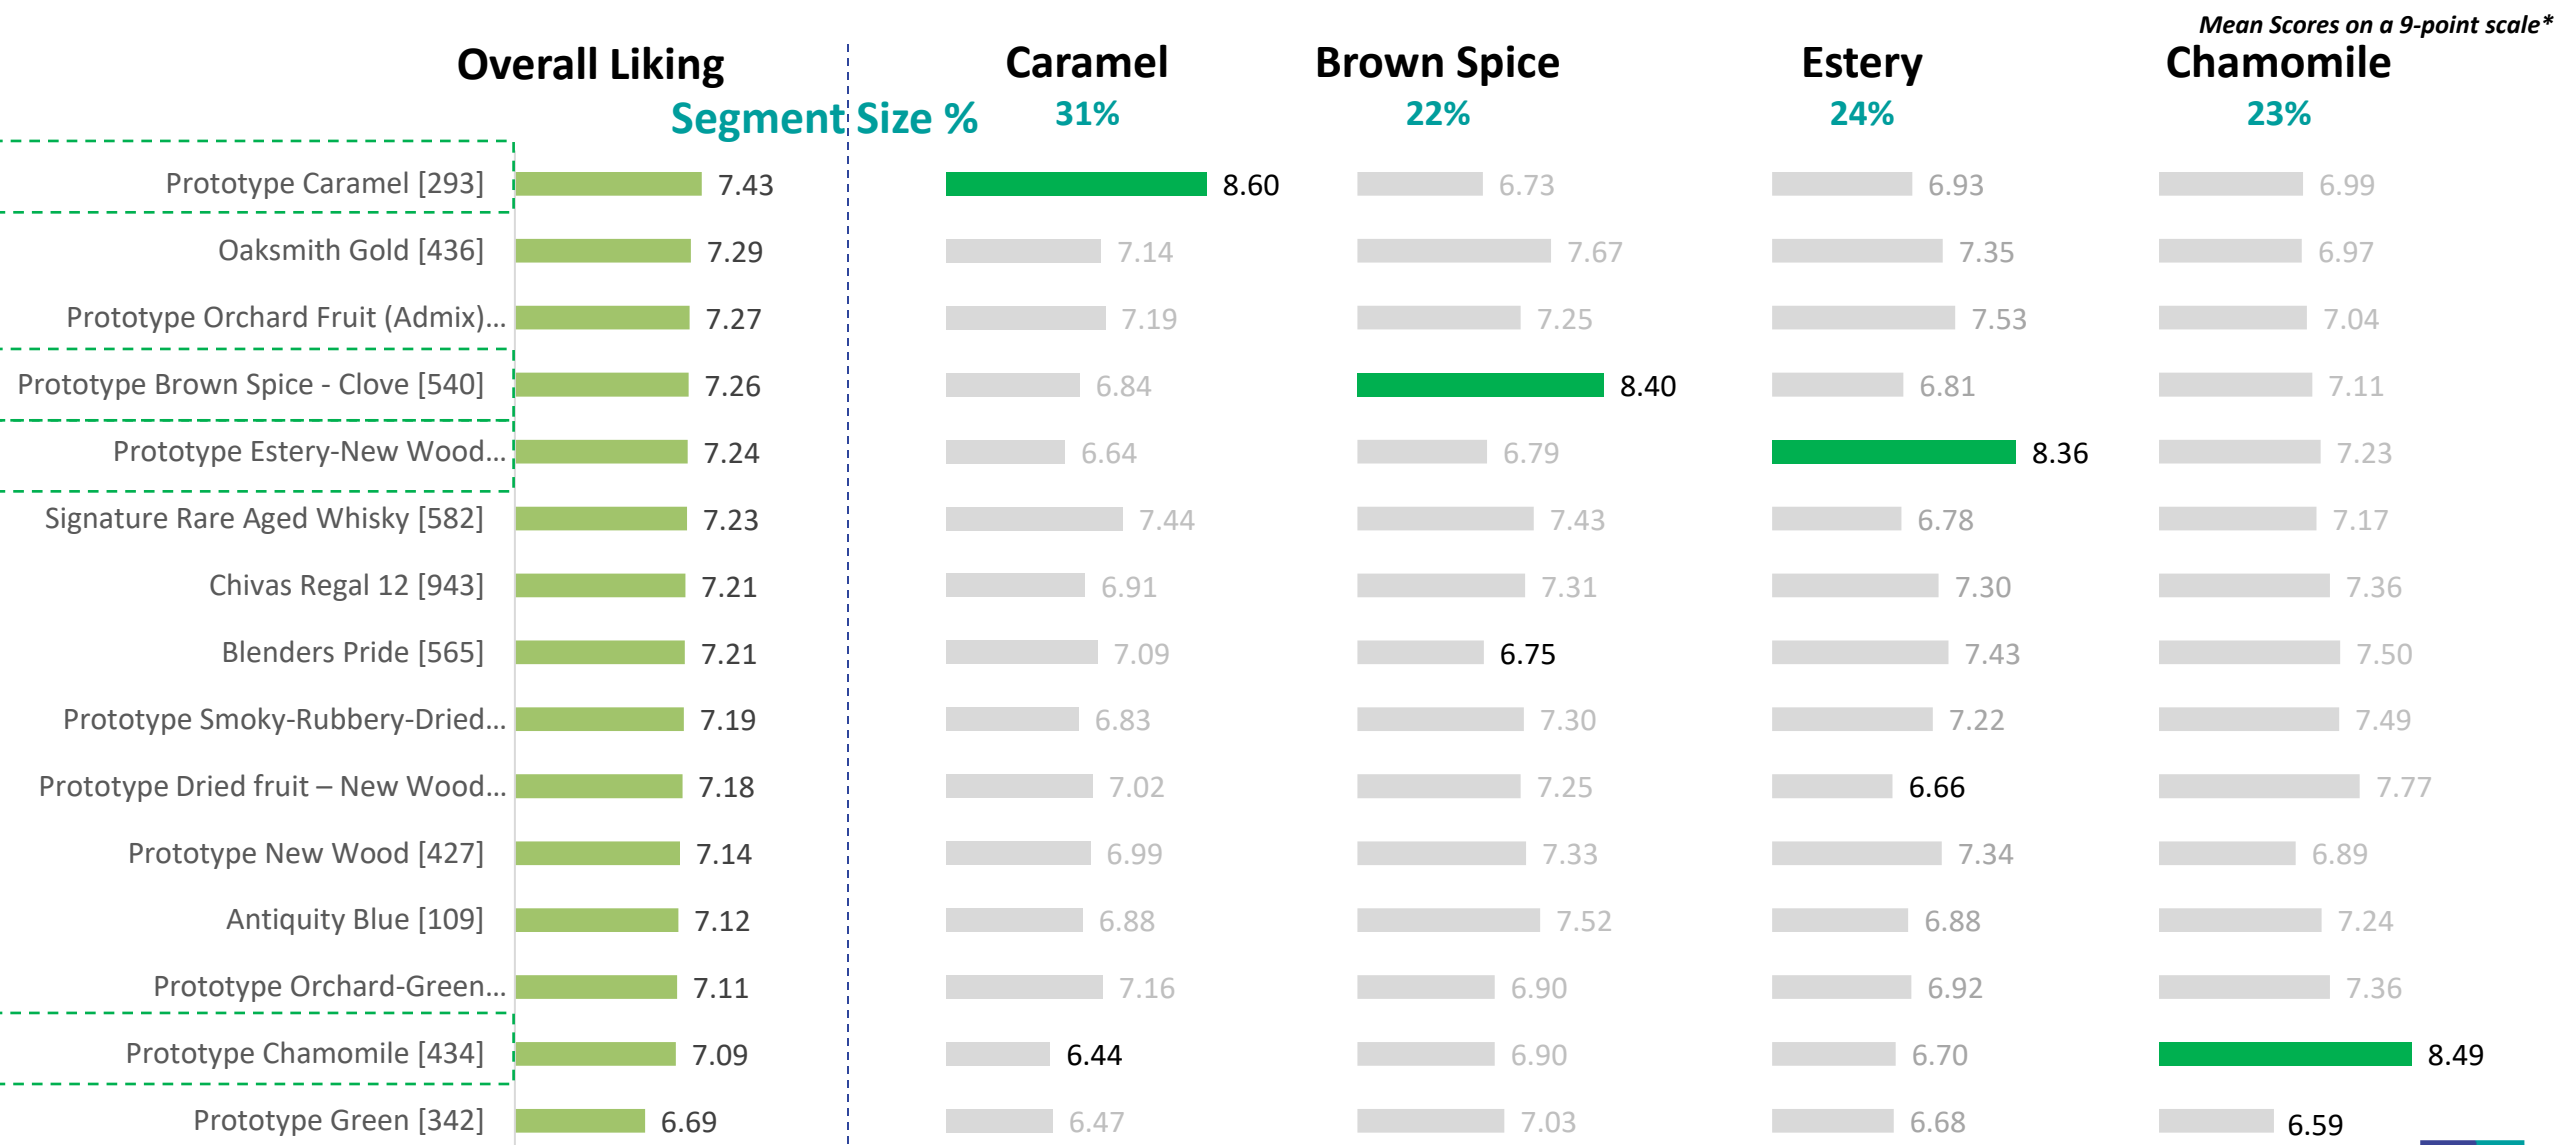

**WHEN WE DIG  
FURTHER FOUR  
DISTINCT  
PREFERENCE  
SEGMENTS WERE  
IDENTIFIED**

The four preference segments occupy different areas of the sensory space, with discriminating sensory drivers of liking

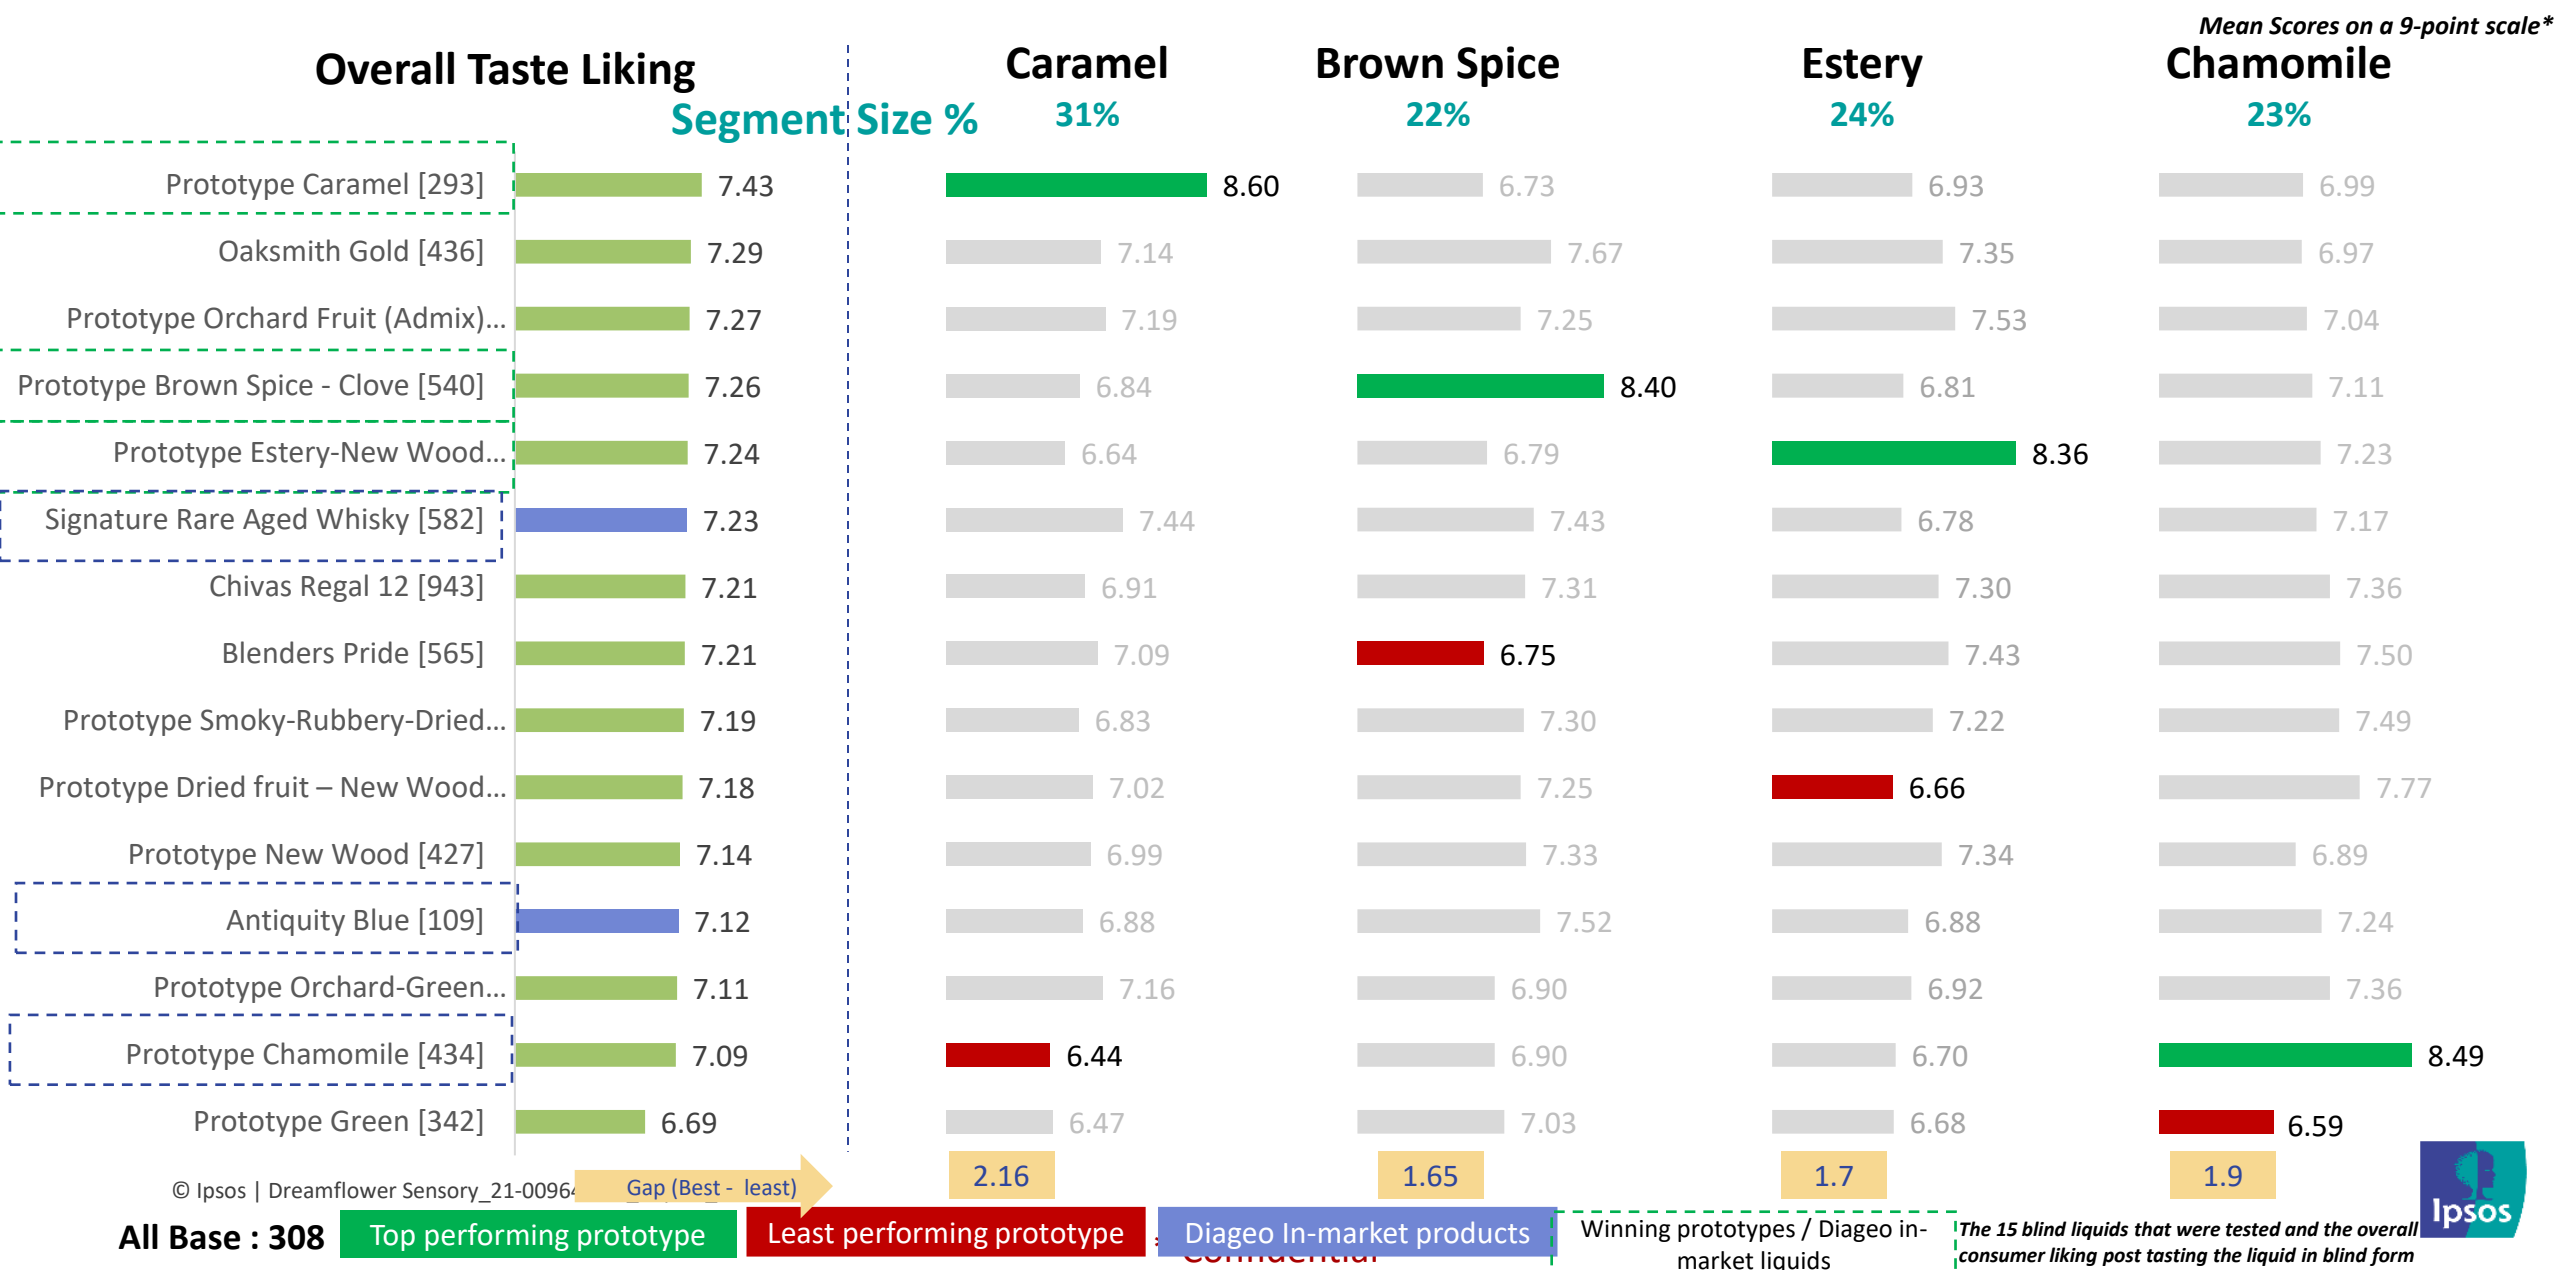

The top performing product in each segment do not perform well in other segment, indicating same product will not satisfy all preferences

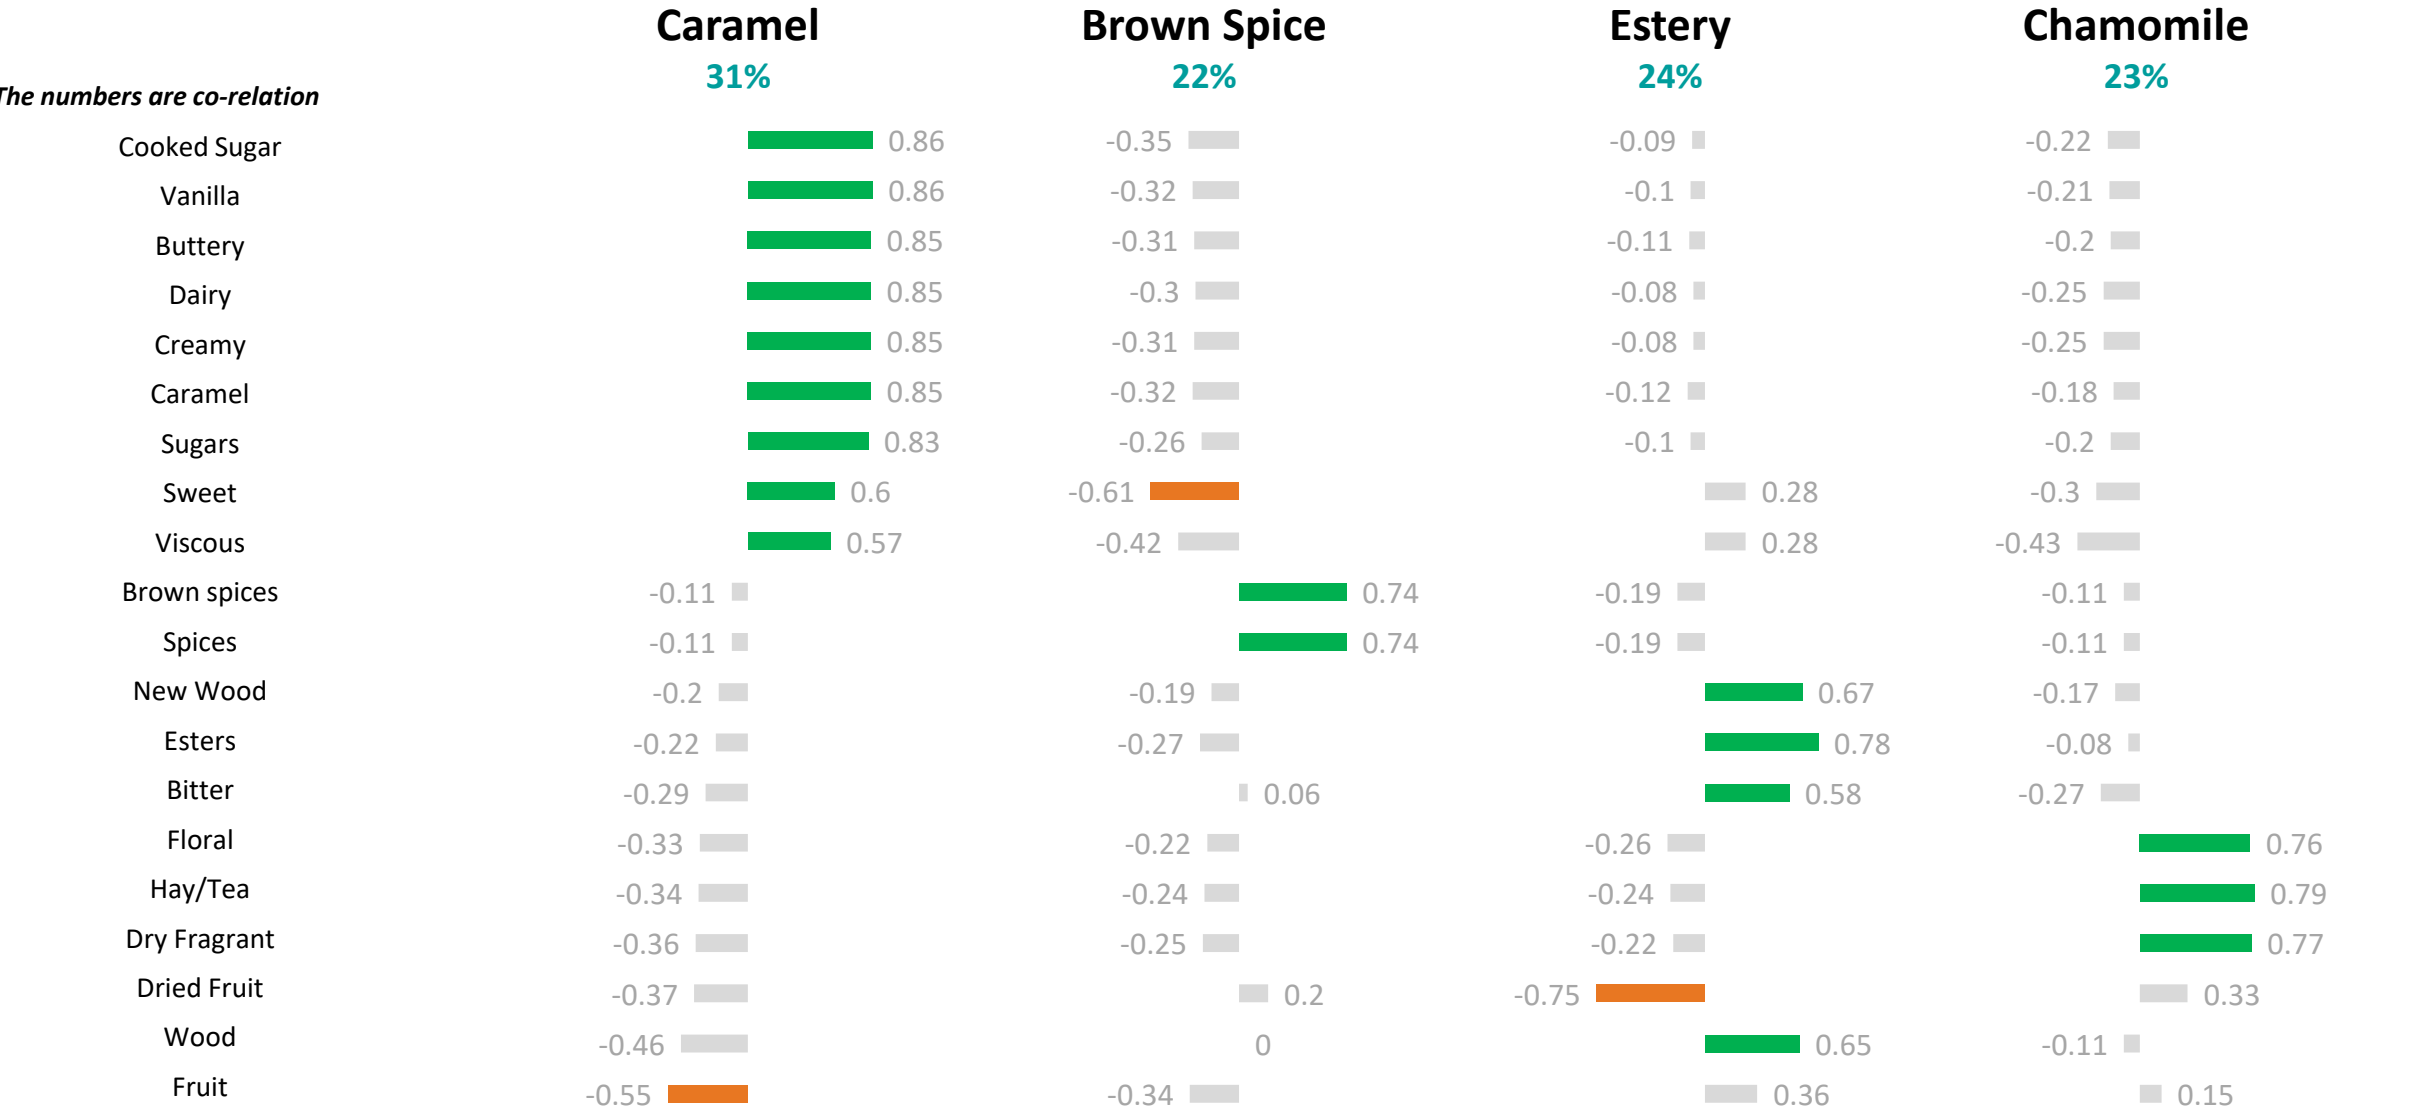

Across segments, Diageo prototypes are most liked products; within current portfolio Signature Rare fares a tad better in Segment Caramel and Brown spice while Antiquity Blue in Segment Brown spice

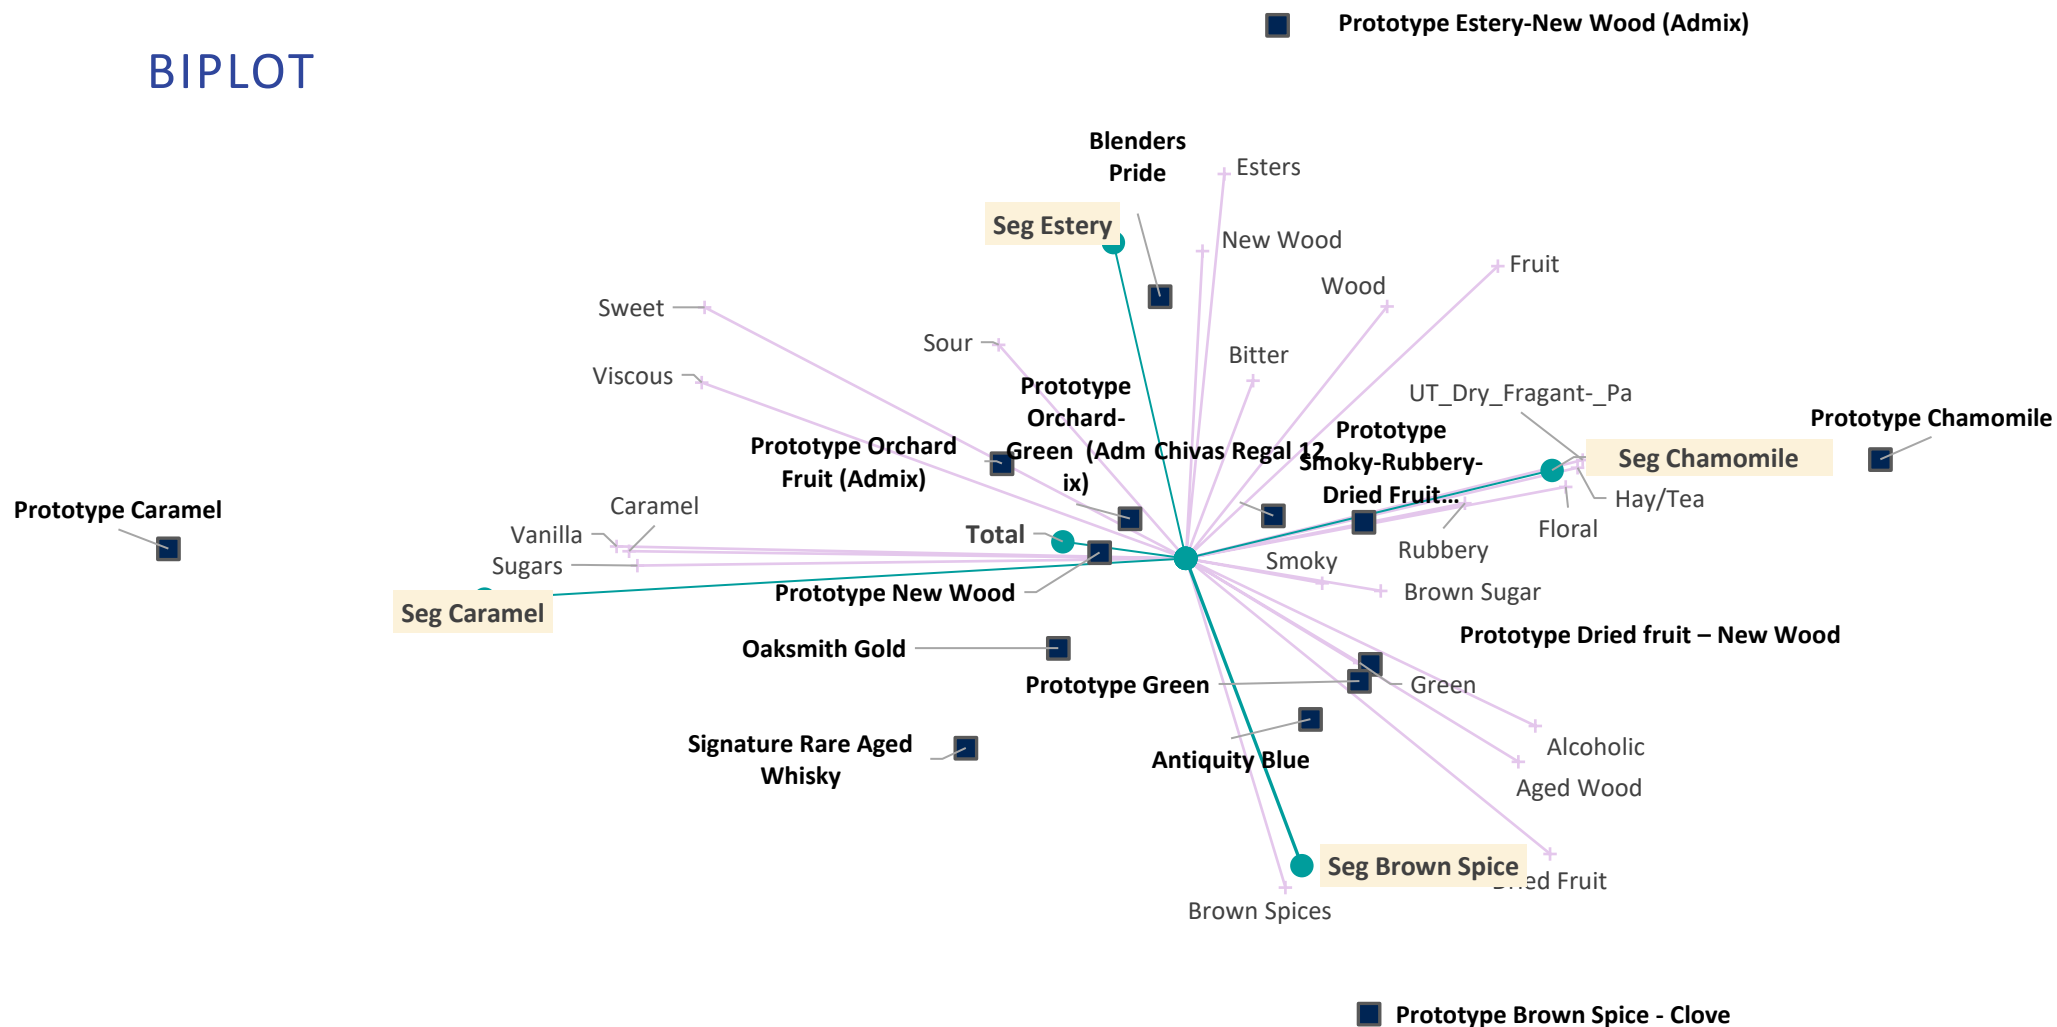

The identified segments are driven by discriminating attributes – leading to segments being wide spread

Winning prototype in each segment stretched the sensory space nicely beyond what is in the market, therefore leading to significant innovation opportunities.

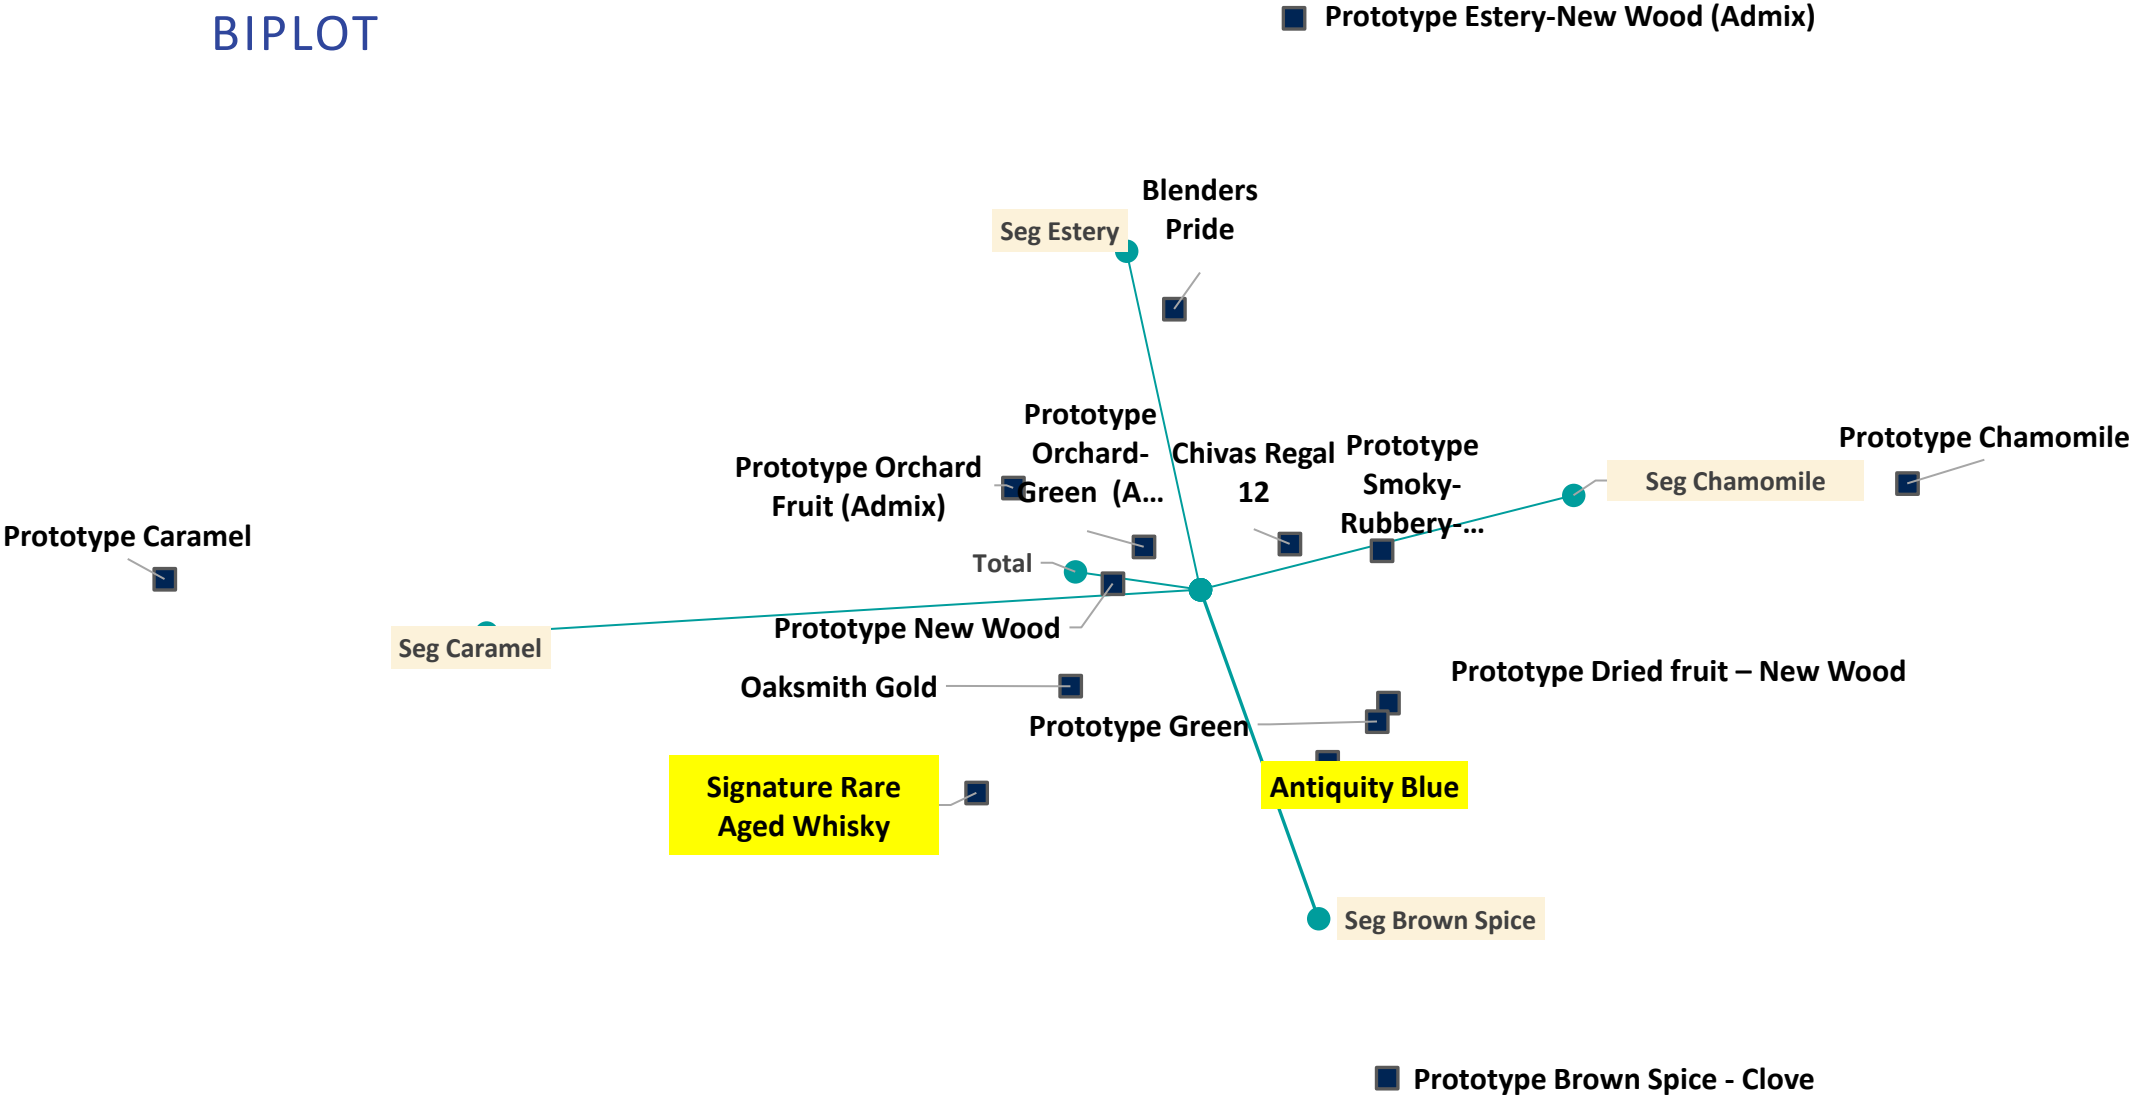

With Diageo prototypes fairing best in each segment, it can consider focusing most on the biggest segment with Prototype Caramel (293) – which fares relatively well on overall as well.

## BIPLOT

Diageo in-market brands and winning prototypes seem to be more discriminating within identified segments vs. Competition brands which are closer to origin indicating none of them are strongly discriminated in a segment – an opportunity for Diageo to leverage upon!

BIPLOT

**CONSUMER  
FLAVOUR  
ARTICULATION  
DIFFERS BY  
SEGMENTS BUT  
EMOTIVE  
BENEFITS ARE  
SIMILAR**

The top emotive words used for winning prototypes within each segment are largely similar

**Caramel & Brown Spice** : Satisfied, Confident, Relaxed

**Estery** : Satisfied, Excited, Relaxed, Delighted

**Chamomile** : Satisfied, Relaxed

EMOTIVE PAY OFF

| Top 3 Emotive pay off for the Winning prototype of each segment |         |             |        |           |
|-----------------------------------------------------------------|---------|-------------|--------|-----------|
| Fig in %                                                        | Caramel | Brown Spice | Estery | Chamomile |
| Segment Share                                                   | 31%     | 22%         | 24%    | 23%       |
| Base                                                            | 94      | 67          | 74     | 70        |
| Confident                                                       | 36      | 36          | 23     | 19        |
| Surprised                                                       | 24      | 9           | 28     | 17        |
| Rewarded                                                        | 17      | 12          | 14     | 6         |
| Excited                                                         | 34      | 25          | 32     | 27        |

# SEGMENT: CARAMEL (31%)

The sensorial segment which is driven by Sweet, buttery, Creamy, Caramel attributes

The winning prototype – Prototype Caramel delivers on the said aspects. Consumer flavour descriptors are in coherence with driving attributes – Vanila & Fruity.

The emotional benefits the prototype fills in for are Confidence, satisfied & Relaxed

Taste and Premium brand image are relatively more important brand choice drivers

Relatively higher proportion claim to be open to pay premium for the winning prototype vs. other segments (56%)

Current Diageo in-market product Signature Rare does relatively better, but only 18% are willing to pay premium

# SEGMENT: BROWN SPICE (22%)

The sensorial segment which is portrayed by association with brown spices and spices

The winning prototype – Prototype Brown Spice - Clove delivers on the said aspects. Consumer flavour descriptors are in coherence with driving attributes – Simple and Spicy

The emotional benefits the prototype fills in for are Confidence & Satisfaction

Taste and popularity of brand are relatively more important brand choice drivers

Relatively medium proportion claim to be open to pay higher for the winning prototype (40%) vs. other segments.

Current in-market product Signature Rare & Antiquity do relatively better, but willingness to pay premium is restricted Signature (19%) and Antiquity (18%)

# SEGMENT: ESTERY (24%)

The sensorial segment is driven by Woody, Ester, Bitter attributes

The winning prototype - Prototype Estery-New Wood (Admix) delivers on them. Consumers describe the flavour as Sweet and woody.

The winning prototype in addition to delivering on Satisfaction and Relaxation, also delights and makes feel excited.

Brand choice drivers in line with category average, Taste being most important followed by popularity and brands offering new & different propositions

Relatively medium proportion claim to be open to pay higher for the winning prototype (39%) vs. other segments.

# SEGMENT: CHAMOMILE (23%)

---

The sensorial segment which is portrayed by association with Floral, hay/tea, dry fragrance.

Consumer flavour descriptors are Bitter and Smokey

Taste, popularity of brand, ease of availability are relatively more important brand choice drivers for this segment

A little less than 2/5<sup>th</sup> open to pay premium to the winning prototype.

# PRODUCT OPTIMISATION FOR EACH CLUSTER

# OPTIMISATION SIMULATOR: IN-MARKET

For **Antiquity Blue**, by

- Increasing Dried Fruit\_No to 9.46, Sugars from 2.12 to 8.86 and Viscous from 2.12 to 2.24
- Reducing Green Pa from 2.62 to 2.15

The overall Taste liking increases from 7.12 to 7.55

## At Overall Level

| Antiquity Blue [109] | Current Profile |     | Optimal Profile |   |
|----------------------|-----------------|-----|-----------------|---|
| UT_Dairy-No          | 0.00            |     | 9.46            | ↑ |

## OPTIMISATION SIMULATOR (PROTOTYPE 293) – WITHIN SEGMENT CARAMEL

The winning prototype in segment Caramel is close to optimal.

To further optimize, For prototype 293, in segment Caramel

- Increasing aged wood note to 2.93 and
- Increasing to a threshold of Green

could result in the overall Taste liking **increase from 8.62 to 9.0**

### Within Segment Caramel

## OPTIMISATION SIMULATOR (PROTOTYPE 388) – SEGMENT ESTERY

Similarly, the winning prototype in segment Estery is close to optimal profile

For prototype 388, in segment Estery

- Decreasing Fruit Pa from 8.55 to 5.91
- Increasing Alcoholic strength from 7.84 to 7.97

could result in the overall Taste liking increase from 8.36 to 8.66

### Within Segment Estery

| Prototype<br>[388]    | Current Profile                                                                                   | Optimal Profile                                                                            |

# BLIND VS. BRANDED

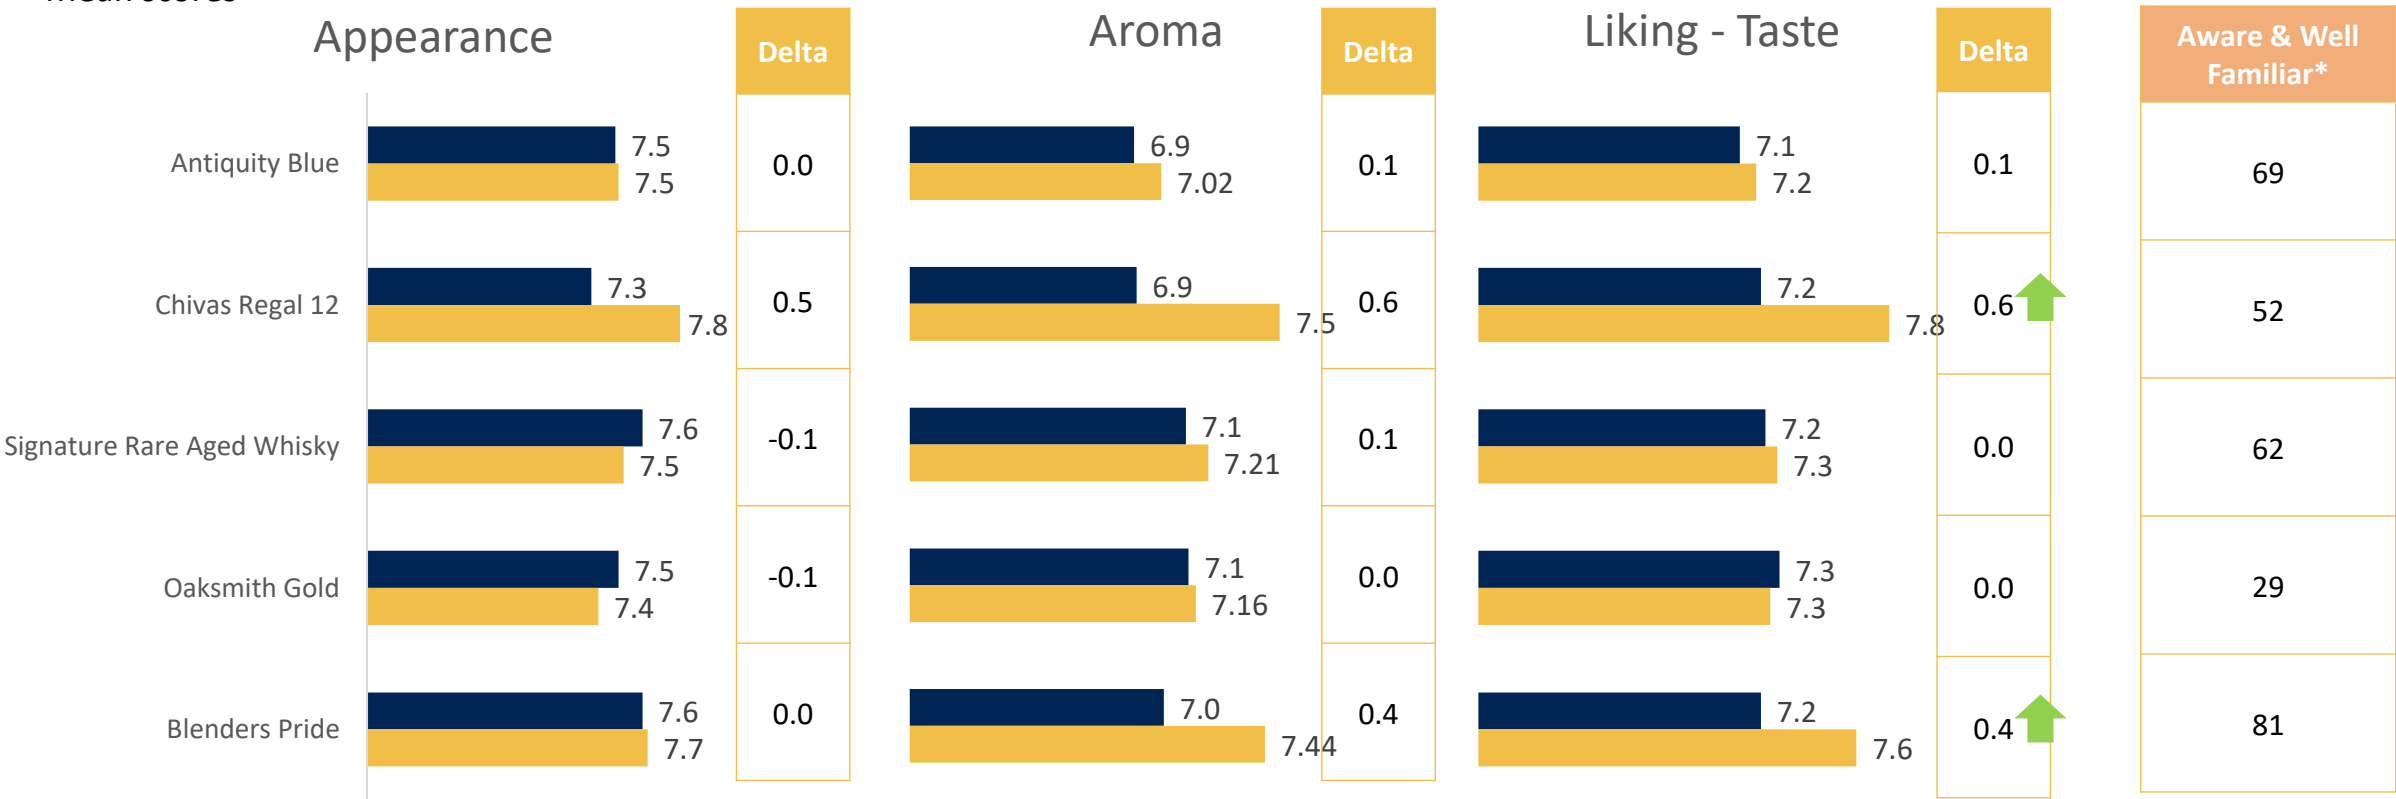

# KEY METRICS (BLIND VS. BRAND)

No differentiation in product likeability in blind format. However, post brand exposure significant uplift happens for Chivas Regal and Blenders Pride primarily on Taste likeability followed by Aroma.

This possibly is driven on the back of second most important brand choice driver – popularity (better familiarity) and the luxury brand perception for Chivas Regal

Mean scores

Blind Brand

Base : Blind : 308; Brand : 206

\* % aware and know a lot / fair bit about the brand

Popularity of the brand aids in strengthening emotive pay-offs, more so Chivas Regal & Blenders Pride.  
Sharpest decline in negative emotions (indifferent & disappointed) for the two brands also driving it's gain on overall.

| EMOTIVE PAY-OFF - AFTER TASTING      | Antiquity Blue |         | Chivas Regal 12 |         | Signature Rare Aged |         | Oaksmith Gold |         | Blenders Pride |         |

# SUMMARY AND WAY FORWARD

# SUMMARY

Four widespread sensory segments with discriminating sensory drivers of likeability

- ✓ Winning prototypes in these segments are discriminating – top performing only in one segment indicating same product cannot satisfy all preferences
- ✓ Across segments, Diageo prototypes are most liked products; within current portfolio Signature Rare fares a tad better in Segment Caramel and Brown spice while Antiquity blue in Segment Brown spice
- ✓ Winning prototype in each segment stretched the sensory space nicely beyond what is in the market, therefore leading to significant innovation opportunities.

© Ipsos | Dreamflower Sensory\_21-009648-01\_Report\_v3

For winning prototype in Segment Caramel, slightly less than 3/5<sup>th</sup> open to pay premium for the product. The winning prototypes in other segments, about a 2/5<sup>th</sup> are claim to pay premium.

While it is not essential to optimise, modelling indicates few changes made to winning products in Caramel and Estery segment can further enhance taste likeability.

Consumer-driven flavour descriptors in coherence with segment attribute drivers

- ✓ Using the descriptors promptly may aid in identifying product as per their palate

The top emotive words used for winning prototypes within each segment are similar – Satisfied & Relaxed. Confident emerges in Segment Caramel & Brown Spice

Brand popularity (key choice driver after taste) and image play significant role in driving likeability.

\* Confidential \*

## WAY FORWARD

- Diageo prototypes are faring best in each segment. Can consider focusing most on the biggest segment with Prototype Caramel (293) – which fares relatively well on overall as well. Also, higher proportion of consumer are willing to pay premium for the prototype vs. other winning prototypes in their respective segments.
- Using the key flavour descriptors in communication may aid in picking product as per one's palate choice.
- The modelling suggests few changes to both current in-market products – Antiquity Blue & Signature Rare, which can enhance taste likeability.
  - However given in blind format, the liquid performance is similar to other competition products and prototypes building on familiarity and creating buzz around brands may enhance the offer performance more. Hence consider strengthening on those aspects.
